	<b>Section A</b>	<b>( 1x7)</b>
<b>I)</b>	<p><b>Read the passage carefully and answer the questions that follow: (Answer any 7 out of 8)</b></p> <p>Butterflies are one of the most fascinating insects in nature. They go through four stages of life: egg, caterpillar, pupa, and adult butterfly. This process is called metamorphosis. Butterflies have delicate wings covered in tiny scales that give them their beautiful colours. They use their long, tube-like tongue called a proboscis to sip nectar from flowers.</p> <p>Butterflies play an important role in pollination. As they move from flower to flower in search of nectar, they transfer pollen, helping plants reproduce. Some butterflies migrate long distances to find warmer climates. The Monarch butterfly, for example, travels thousands of kilometres from North America to Mexico every year.</p> <p>Unfortunately, the butterfly population is declining due to habitat loss and climate change. Conservation efforts, such as planting butterfly-friendly gardens and reducing pollution, can help protect them.</p>
